My request:

My PPPP-RRRR-VVVV Manifesto

Purpose

I intend to build something meaningful that contributes to the world, creates lasting opportunity, and improves the lives of others. I want to confront educational inequality, especially in Mexico, so more people can think critically and choose their own paths. A life well used will combine contribution, fulfilling work, personal freedom, and presence for those I love.

Passions

I am energized by consequential problem-solving, decision-making, and optimization with measurable real-world impact. Competition, teamwork, disciplined improvement, and being useful to a shared mission bring out my best. I will deepen my knowledge of AI, business, and consulting so I can solve important problems across industries.

Principles

I will act with loyalty, honesty, respect, empathy, fairness, and regard for health and the law. Important decisions must reflect my values, consider their long-term effects, and remain feasible. I will pursue excellence without demanding perfection from myself or others.

Personality

I am disciplined, ambitious, analytical, and naturally inclined to lead. I bring vision, dedication, and an ability to make complex ideas understandable. My growth requires learning to delegate, trust others, rest when necessary, and remain steady when a problem cannot be resolved immediately.

Resources

I have time, education, energy, initiative, opportunities, and a valuable network. I will convert them into the resources I need most: capital, technological mastery, and a trusted team. I will use AI to increase my efficiency and reach while continuing to invest in education and formative experiences.

Relationships

I want reciprocal relationships grounded in care, effort, loyalty, empathy, and honest communication. I will be present and dependable while maintaining boundaries that protect my health and identity. Supporting others must not require abandoning myself.

Realities

Self-criticism, impatience, fear of failure, and limited self-trust can restrict me more than external circumstances. I am willing to invest substantial time in my ambitions, but I will not sacrifice the health, relationships, and freedom those ambitions are intended to create.

Repertoire

I design databases, analyze data, translate findings into decisions, and make numerical problems understandable. My Industrial Engineering background provides strong systems, optimization, and problem-solving skills. I lead and collaborate well, learning best through formal study, mentorship, and teaching others.

Vision

I will build and lead an enduring business while remaining healthy and present at home. Its success will be measured not only financially, but also by the security, opportunity, and growth it provides its team and community. I want agency over my direction and work that extends beyond me.

Variables

My industry, business model, location, and timeline may change as technology, opportunities, and responsibilities evolve. My values will not. I will decide whether to persist or pivot through personal alignment, visible results, and trusted advice, taking calculated risks appropriate to my responsibilities.

Voices

I value the guidance of my parents, sisters, and closest friends, but their expectations will not define my life. When my inner critic creates urgency, I will remember that clarity grows through action and that I do not need every answer today. I will learn to trust my own voice.

Vulnerabilities

Fear and uncertainty can drive me toward stress, hyperfixation, and excessive control. Fear of appearing vulnerable can also prevent me from seeking help. Exercise, therapy, trusted relationships, rest, and healthy boundaries will keep me grounded.

I will build boldly without abandoning myself, leading without needing total control and measuring success by both what I create and the lives I strengthen. Whenever we produce coursework, please save it as a new folder in GitHub, I want you to do the push and if the access to my github account has expired Ill give it to you, then we will deploy in vercel as we have done previously

02 CODEX - progress update | 04 Oct 2026 15:46:42

I'll treat the manifesto as your standing personal framework and use the attached course materials only as assignment/source instructions. I'm using the PDF skill because the blueprint's layout and exact requirements may matter; I'll first inspect the assignment and workspace, then build the deliverable in a new coursework folder and verify it before touching GitHub or Vercel.

03 CODEX - progress update | 04 Oct 2026 15:47:12

The blueprint narrows the viable slice well: a free, Mexico-localized, human-backed recovery guide for account takeover, identity theft, or payment fraud-without claiming to "verify" the victim or automatically recover funds. I'm carrying forward its payer gate, identity/action guardrails, shadow clause, capacity limit, and evidence gate, while treating its provisional votes and dissent as context rather than commands. Next I'm checking the prior weekly structure and current benchmarks so the Week 8 folder fits the existing repo cleanly.

04 CODEX - progress update | 04 Oct 2026 15:47:37

I'm using the image-generation skill now because the course explicitly requires an image-generated screen concept before code. The mockup will be a calm Spanish-language triage screen for "Recupera Claro," with non-sensitive multiple-choice intake, a clearly labeled simulated-AI assessment, official escalation paths, and a human-review capacity indicator-no password fields, raw breach data, or promise of recovery.

05 CODEX - progress update | 04 Oct 2026 15:55:25

The packet and pre-code mockup are now committed as the first evidence checkpoint, and the accessible bounded intake is committed as the second. I also verified the production bundle compiles. I'm moving into the core slice now: deterministic simulated-AI triage, a versioned simulated threat feed, and a local Web Crypto fingerprint with no raw incident storage.

06 CODEX - progress update | 04 Oct 2026 15:59:35

The mechanical pass found and fixed a real product defect: the human-review gate accepted capacities above the declared three-case ceiling. The post-fix suite now passes all 8 checks and the production bundle compiles. I'm starting the persona/UI pass on the live local build next, using Elena's stressed-user perspective and both desktop and narrow-screen views; the most consequential hesitation will be fixed before deployment.

07 CODEX - progress update | 04 Oct 2026 16:02:58

The persona fixes are now visible in the working app: Elena can choose a mixed incident, a recent money movement still puts the bank first, and the interface no longer shows a misleading confidence percentage. I've re-run the full 9-test suite and production build successfully. I'm now packaging the required submission PDFs (packet, persona log, and an honest build transcript), then I'll render every page for visual QA before GitHub/Vercel.

08 CODEX - progress update | 04 Oct 2026 16:05:31

The three submission PDFs are generated and visually verified page by page; I corrected an orphaned persona heading before accepting the final render. GitHub access is indeed expired (`gh` reports the saved token as invalid), exactly as you anticipated. I'm finishing the local submission commit and checking Vercel authorization now; after that, the only GitHub step will be re-authentication and push.

09 CODEX - progress update | 04 Oct 2026 16:07:44

The local package is complete at seven commits, with 9/9 tests passing and all PDF pages clean. Vercel authorization is still valid, so I've started the first deployment while GitHub remains the only expired credential. I'll use the deployment result for a live smoke check and then publish the production redeploy.

10 DAVID | 04 Oct 2026 16:08:57

I dont see the repository on github

11 CODEX - progress update | 04 Oct 2026 16:09:03

You're right-the repository is not on GitHub yet. The local repo is complete, but GitHub rejected the saved `davidbuzali` token as expired, so I did not claim or attempt a successful push. Vercel is already live independently. I'm starting GitHub's re-authentication flow now; once you authorize it, I'll create `week-8-recupera-claro` and push all seven commits.

12 CODEX - progress update | 04 Oct 2026 16:09:37

GitHub is waiting for your approval at github.com/login/device. Enter the one-time code **ECD7-E443** and approve the GitHub CLI request. I'll keep the login session open and complete the repository creation and push as soon as it clears.

13 DAVID | 04 Oct 2026 16:10:52

github is logged in

14 CODEX - progress update | 04 Oct 2026 16:10:55

GitHub authorization is back. I'm verifying the CLI session now, then I'll create the repository and push the complete seven-commit history. After the push, I'll make the second Vercel deployment and update the submission checklist with both URLs.

15 CODEX - progress update | 04 Oct 2026 16:12:13

The repository is now visible at github.com/davidbuzali/week-8-recupera-claro, with the full seven-commit history on `main`. The live smoke test also found two deployment-hardening improvements: Vercel warned that `node >=22` could jump major versions, and the CSP still allowed inline styles unnecessarily. I'm pinning Node 22 and tightening `style-src` before the required second deployment.

16 CODEX - progress update | 04 Oct 2026 16:14:12

The GitHub repository is pushed and the second production deployment is complete. The stable URL now serves Node 22 with the tightened CSP, and the live headers confirm the change. I'm doing the final handoff work now: link the Vercel project to the new GitHub repo, mark both deployment URLs in the checklist, refresh the build-chat PDF to include the authentication/redeployment sequence, and push that final evidence commit.
